Over 24 years of experience with Industrial Stormwater Permitting:

- **Notices of Intent including identification of Impaired Waters**
- **Stormwater Pollution Prevention Plans (SWPPPs) tailored to the customer's particular needs and methods of operation**
- **Management of stormwater sampling and reporting programs**
- **Program management services to track submittal deadlines: Annual Reports, Discharge Monitoring Reports, NOIs, etc.**
- **Customized training for Facility personnel and Managers: Stormwater & facility inspections, stormwater sampling, reporting requirements, etc.**
- **NOV/Warning Letter Resolution and Regulatory Interaction**

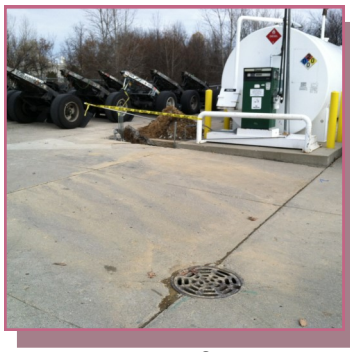
GEOS ENVIRONMENTAL NPDES PERMITTING LOCATIONS

NPDES Industrial Stormwater Permitting

Consistency and Experience: One company, from coast to coast. **GEOS personnel have provided stormwater permitting and Stormwater Pollution Prevention Plans in over 35 states, for more than 24 years.**

Convenience & Simplicity: We strive to make your job as simple as possible—Deliverables (including NOIs and DMRs) are complete with transmittal letters and instructions for submittals, including transmittal letters that can be submitted directly to regulators. GEOS always provides electronic copies of all deliverables.

Worry-Free Program Management: We can provide additional management services that include automatic inspection notifications by email; Permit Number tracking; NOI and SWPPP submittal dates; NOI renewal dates; DMR due dates; and Annual Report due dates. We also can provide abbreviated facility-wide compliance assessments that integrate with stormwater permitting activities.



Making it Simple for Facility Managers: Your managers primary job is not stormwater management. That's why our plans are complete with several years of inspection sheets, annual reports, copies of permits, employee training logs, and other convenient information, forms, and logs. If sampling is required, GEOS provides comprehensive information & procedural documents, as well as coordination of lab services. We take the time on-site to explain the purpose and procedures of stormwater management.
